

Module 6 Sedimentation Control Assignment

- 1) Identify locations for silt fences on your construction site. Make sure that the slope and length specifications are met. Determine the type of silt fence needed for each area.
- 2) Determine the expected performance of the silt fence in controlling sediment for each silt fence.
- 3) Locate the most suitable location(s) for a sediment pond for your site. Prepare a preliminary design for at least one pond, and discuss the suitability of ponds for the control of sediment at your site.
