

Modeling Catchbasins and Hydrodynamic Devices

Tab 6a

PVA LLC
January 2022

1

We will cover . . .

- **Research Results**
- **Entering Catchbasin Data into the Model**
- **Model Output**
- **Variable Sensitivity**

Catchbasins

Research Results

- **A New Jersey study (Pitt, *et al.* 1994) found average removal rates of 32% for suspended solids using catchbasins with a suitable sump.**
- **Pitt & Shawley (1982) found cleaning catchbasin twice per year reduced total residue yields between 10% and 25%.**
- **Pitt & Field (2004) found sediment in catchbasins were the largest particles washed from streets.**

Catchbasins . . .

- Are Inlets or Manholes
- Must Contain a Sump
- Are not very useful if streets are also swept
- Are typically applied as drainage controls
- Must be cleaned

CONCEPTUAL SKETCH OF STORM SEWER CATCH BASIN AND SUMP FOR NONPOINT SOURCE POLLUTION CONTROL

Four Components to Modeling Catchbasins

1. Device Density
2. Device Geometry
3. Flow and Particle Size Data
4. Device Cleaning Information

Catchbasin Control Device

Drainage System Control Practice

1. Area served by catchbasins (acres): 3.000

2a. Catchbasin density (cb/ac): 0.5

2b. Number of Catchbasins: 2

3. Average sump depth below catchbasin outlet invert (ft): 3.00

4. Depth of sediment in catchbasin sump at beginning of study period (ft): 0.00

5. Typical outlet pipe diameter (ft): 1.00

6. Typical outlet pipe Manning's n: 0.013

7. Typical outlet pipe slope (ft/ft): 0.020

8. Typical catchbasin sump surface area (sf):

9. Catchbasin Depth from Sump Bottom to street level (ft):

10. Inflow Hydrograph Peak to Average Flow Ratio

11. Leakage rate through sump bottom (in/hr): 0.00

12. Select Critical Particle Size file name: C:\Program Files\WinSLAMM\URP.CPZ

Typical Catchbasin Densities

Low density residential (0.25 inlets/acre)

Medium density residential (0.5 inlets/acre)

High density residential (1 inlet/acre)

Strip commercial (1.2 inlets/acre)

Shopping center (1.2 inlets/acre)

Industry (0.8 inlets/acre)

Freeways (1 inlet/acre)

Control Practice #: 1 CP Element #: 1

Inflow Bypass Data

Inflow Bypass Data

Two Options – Either User-defined Maximum Flow, or . . .

Catchbasin Flow Bypass Data

Maximum Flow to In-Line Sump **Lamella Plates or Tube Settlers**

1.20 Maximum Flow to In-Line Sump (cfs)

Flow Inlet Diversion Elevation

Diameter of Orifice that Controls Flow to In-Line Sump (ft)

Inflow Orifice Invert Elevation (ft)

Length (ft) of Overflow Structure Acting as a Sharp-Crested Weir

Elevation of Overflow Structure to Bypass In-Line Sump (ft above sump base)

Fraction of device area with plates or tubes

Average tube diameter or distance between plates (ft)

Number of plates or tubes that a vertical line will intercept

Clear and Exit **Continue**

Inflow Bypass Data

Defined Flow Diversion Geometry

Lamella Plates or Tube Settlers are also an option

(See Hydrodynamic Device discussion)

Flow and Particle Size Data

10. Inflow Hydrograph Peak to Average Flow Ratio: 3.8

11. Leakage rate through sump bottom [in/hr]: 0.00

12. Select Critical Particle Size file name: C:\Program Files\WinSLAMM\NURP.CPZ

Particle Size Distribution File not accessible if Flows and Particle Sizes transferred through the drainage system

Catchbasin Control Device

Catchbasin Performance

- Particulate removal based upon particle size
- Settling modeled as a detention basin assuming:
 - Vertical sides
 - No storage
- Flow rate calculated using Complex Triangular Hydrograph

Other Output Options

- Stage-outflow data
- Performance by time step
- Stage-inflow data

Hydrodynamic Devices

Research Results

- Clark (2006) evaluated the performance of inclined plate settlers for treating stormwater solids
- Greb, *et al.* (1998) evaluated the performance of a hydrodynamic device in a City of Madison maintenance yard.

What are Lamella Plates?

Key Variables

- Fraction of device area with plates or tubes
- Average tube diameter or distance between plates
- Number of plates or tubes in a vertical line

Increase the effective surface area of the device by the number of times a vertical line crosses a plate or tube
